FOREWORD

I wish to take this opportunity to thank you for your many very generous orders which it has been my pleasure to receive. The many "repeat orders" show, without a doubt, the satisfaction these bulbs have given. All orders are filled from fine New England grown bulbs. My bulbs this year are of excellent quality despite the rather adverse season. Perhaps this is due to the fact that I gave my planting stock more room this year, planting a larger acreage with about the same amount of stock. Therefore, if you have not tried my bulbs, try some this year. I'm certain you won't be disappointed in them.

Terms: Single bulbs or bulblets at the ten rate, but no single item for less than five cents. 25 bulbs or bulblets at the 100 rate; 250 at the 1,000 rate. Pints and half pints in generous measure at the quart rates. Prepaid spring delivery on all orders over \$2.00—except for F. O. B. prices.

Cash, please. With the following extras of your selection: On orders up to \$5.00 you may select 10% in extra bulbs; \$5.00 to \$10.00, 15% in extra bulbs; \$10.00 to \$20.00, 20% in extra bulbs. Over \$20.00, 30% in extras. If you purchase large bulbs only in lots of 25 or more and will call for them or pay express charges, you may take a cash discount of one-third instead of extra bulbs. The above extras and discounts do not apply to F. O. B. quotations. Gratis bulbs for the names of your glad-loving friends.

Stocks of bulbs for 1939 guarantee the same bright, clean, healthy stock as usual.

As in previous years, I have a limited number of extra large jumbo bulbs. If you wish these bulbs, specify, and send in your order early. The bulbs I prefer to grow myself and will use in filling orders are plump high crowned stock from bulblets or small planting stock. (L) large, (M) medium, and (S) small sizes are those common to the trade. Large bulbs can be depended upon for the finest spikes. Medium sized bulbs will prove very satisfactory. Small bulbs may do well. Varieties in the 40-25-15 range, such as Afiame, Aida, Yvonne, may also be purchased in standard sizes per 100 as follows: No. 2, \$2.40; No. 3, \$2.00; No. 4, \$1.50; No. 5, \$1.00; No. 6, 60c; prepaid delivery.

Join the Connecticut Gladiolus Society if you live nearby. You will be warmly welcomed by its members. Send the dues of \$2.00 to me and I will be glad to forward them to the Secretary.

Perhaps the past season was very disheartening for many of you flower lovers. Some of you probably saw your dreams fulfilled, others of you were disappointed. Personally, I do not think we should judge too much by the past season. Seven days of steady rain, then five weeks of drouth, ending with five days of rain and a hurricane is enough to spoil any plant. However, with a little care to your bulbs this winter they should be in good condition for next season. Be sure you have no thrips on your bulbs while they are in storage.

If you were bothered with thrips last season and can move to a new patch of ground, do so, even though it may be but a short distance from the old patch. Gladioli like to be planted in a different place whenever possible.

Clean, healthy, bulbs, planted in good, healthy soil **should** give very fine results!

Successful control measures include the following:

(1) Treat the bulbs with Cyanogas-G or other fumigant upon cleaning the bulbs in the fall. Small quantities of bulbs may be put in paper bags or shoe boxes and sprinkled with Naphthalene flakes—1 ounce per 100 lbs. Let the flakes evaporate. (2) Store in a cool, dry place and keep at a temperature of 40 degrees. Do not let the bulbs freeze. (3) Treat or soak in a solution of bichloride of mercury (corrosive sublimate) before planting. Husk the bulbs previously, if possible. Soak for two hours in a solution of 1.1000. one tablet to one pint of water. Use stone crocks, glass jars, or wooden tubs—not a metal container. Large numbers of bulbs may be tied in sacks and kneaded on the floor in lieu of husking. Thorough soaking will destroy all thrips and their eggs. (4) Spray every week or ten days after the plants are six inches high. Do not wait until the buds appear. It is too late then. Effective spraying will control those thrips that have survived or that may appear from nearby infestations. The cheapest and most effective spray now seems to be a combination of molasses or white sugar, and paris green or arsenate of lead—one pint of molasses to two tablespoons of paris green to three gallons of water. Keep the solution well stirred. An over dose of paris green will severely burn the foliage or even kill the plants. Arsenate of lead will not burn, sticks to foliage better, but shows up plainly on foliage. Black-leaf 40 may be added if desired. Apparently, thrips have a "sweet tooth" and thus get the poison. Other and more expensive materials are Cubor, Red Arrow, and Lethane. Cubor dust—1% rotenone—proved very effective, when applied before the dew was off, and may supplant spraying.
